Magnetotransport in Two-dimensional Electron Systems in dc Electric Fields
Michael Zudov (PI), Zhang, Chiang, Physics & Astronomy, University of Minnesota
Pfeiffer, West, Bell Labs

- 2DES in magnetic and dc electric fields
  - Hall-field induced resistance oscillations
  - Due to commensuration of cyclotron energy and electrical energy drop between Hall-field tilted Landau levels

- MAJOR OBSERVATIONS
  - New resonant condition
  - Resistance suppression by low current and separated Landau levels
