Magnetostrictive Thin Film Galfenol for MEMS Applications
Rajneeta R. Basantkumar, William P. Robbins, Bethanie J. H. Stadler (PI)
Department of Electrical and Computer Engineering, University of Minnesota

- Galfenol-coated $\text{Si}_3\text{N}_4$ double-clamped cantilevers
  - Beams were magnetically actuated
  - Applications will include microvalves, micropumps, MEMS sensors and actuators

- Mechanical Properties
  - First to measure hardness (5 – 9 GPa) and Young’s Modulus (136 -187 GPa) of Galfenol thin films
  - Young’s Modulus of thin films is higher than bulk values

- Magnetostriction
  - Measured magnetostriction up to 163 ppm
  - Double peak trend of magnetostriction versus %Ga is similar to bulk Galfenol
