A Rapid Thermal Method for Cocrystal Screening
Raj Suryanarayanan (PI) & Enxian Lu
Department of Pharmaceutics, University of Minnesota
NNIN Facility utilized: Characterization Facility

● **Experiment**

The compound 1 and 2 physical mixtures were heated in variable temperature-XRD and their XRD pattern at different temperature were recorded.

● **Results**

Characteristic cocrystal peaks, 3 (12.1 and 13.4° 2θ), appeared at 125°C (eutectic temperature) and the peak intensities increased with temperature.
